

Access control that keeps you in touch

Because we think access control works best when it's both simple and secure, we've combined our 30 years' experience with the latest internet technology to create Aliro – the next generation of access control. Aliro puts you in control wherever you are, even when you're mobile, and takes the complexity out of your security.

Aliro – IP access control without complication

Simple, guided steps to strong security

Managing access control used to take specialist training and a dedicated PC running specialist software. Not any more. Aliro's intuitive, guided steps walk you through every task from adding a new user to changing access permissions. In fact, many tasks can be carried out with Aliro's dedicated smartphone app, and none require specialist training.

Apps to monitor and manage on the move

Our Apple and Android compatible apps mean real-time monitoring, user management and administration from your smartphone. You can enable and disable alarms, lock and unlock doors, authorise users and check who's in and who's out – wherever you are. Security has never been more convenient, and you've never been more in control.

Intuitive web browser software

Any device with an internet connection can use Aliro's web-based software. That means the flexibility to operate and administer Aliro anywhere – system function programming is simple and updating is always efficient.

Cost effective

Aliro is designed to expand quickly as your needs grow so it's cost effective from one door to over 500. And because Aliro can be controlled through a web browser or mobile app, there'll be fewer expensive, out-of-hours calls to key holders.

Simple to use for card holders too

Aliro makes life easy for card holders. The displays are clear and user-friendly and where OLED display readers are installed, they provide direct messaging in clear language that simplifies your admin tasks.

Where Aliro wins

Aliro solves the problems of lost keys or widely circulated entry-door codes – yet still provides trouble-free access. It controls main entry doors day-to-day and gives time-limited access – perfect for private offices and server rooms. Main doors can be set to automatically lock during break times and outside business hours. And the smartphone app means you have the ultimate flexibility to make the system work just how you need it to work, no matter where you happen to be.
