SPC Connect:
Get connected,
take control

vanderbiltindustries.com/spc-connect
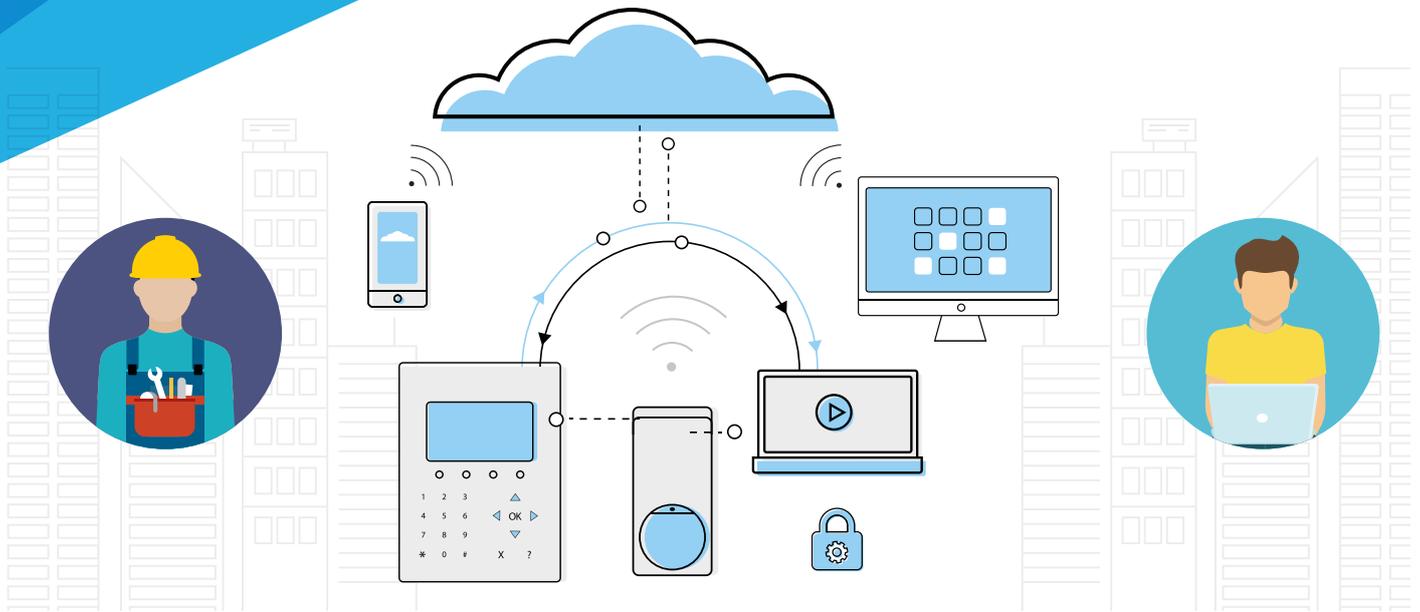

SPC Connect is a cloud-based solution that allows installers to monitor, manage and maintain SPC panels instantly and remotely from any location. The result will empower your business.

SPC Connect provides a structure to organise company personnel by offering definable roles and permissions per individual. It also allows managers to delegate groups of panels to installation engineers and as a business grows the structure and model they use can grow with them.
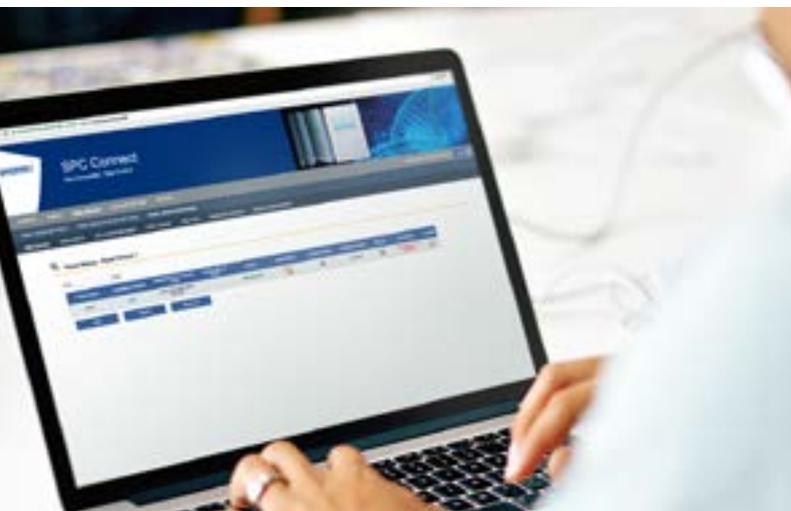

Remote Maintenance for SPC Systems

This feature is perfect for security installers who provide their customers with system status reports. Operating in an automatic or manual mode, SPC Connect offers an overview of the system and highlights any issues or areas of concern remotely.

Configuration File Management

Installers can store every change or periodically store the configuration file from the end customer's site using this function. It can also be used to restore configurations, view changes, make notes on why changes were made or, if necessary, download the file locally to their PC.
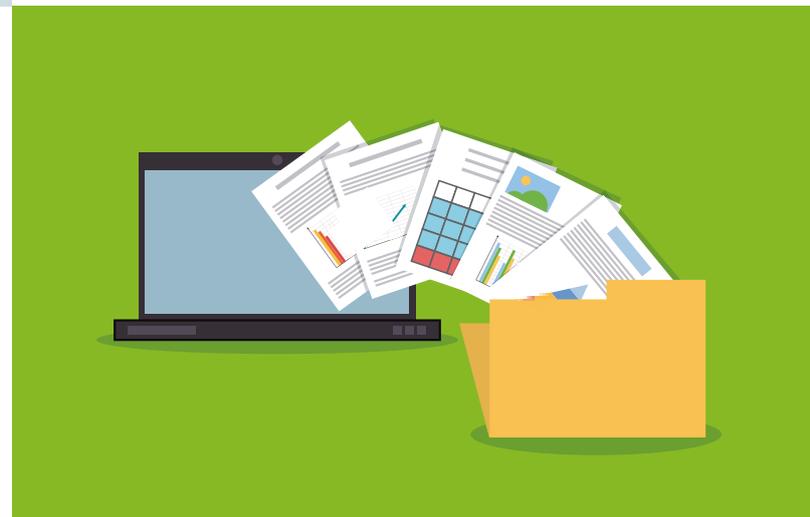

Configurable Installer Profiles

This feature enables the installer to take control and handle the level of permissions available to each installation engineer.

Auto Enrolling of SPC System

Saves a security installation business time by offering them the facility to auto enrol SPC Panels into preconfigured groups to immediately enable the SPC connect functions that they have predefined.

Direct Access to SPC Web Page

SPC Connect enables a security installation business to provide any installer (such as a direct employee or a sub-contractor) permissions to remotely access the SPC web portal. This allows for instant access to all configuration options and immediate support for their end customers.

Inspection of FlexC Status

SPC Connect allows security installation businesses a smart and efficient manner in which to monitor and inspect the status of FlexC communications across all panels in their database.

Grouping of Systems – Panel Groups

This makes it possible for the installer to organize the SPC systems they monitor and maintain into logical groups in order to control and define the benefits they wish to offer their end customers.

Mobile App for End Users

End users can download the SPC Connect app free of charge from the Apple App Store or Google Play. This provides them with an interface that displays clearer arming and status information. All of the user's interactions through SPC Connect are secured with financial grade SSL security, giving peace of mind alongside powerful control.

Highlights:

- ✓ Complete remote programming of SPC systems
- ✓ "Always on" communication allowing for instant access
- ✓ Organization structure to support business workflow
- ✓ Definable roles and responsibilities
- ✓ Installer support services
- ✓ Monitoring communications
- ✓ Maintenance reports
- ✓ Configuration file maintenance
